

PROJECT NAME :

SYSTEM FOR EXERCISE

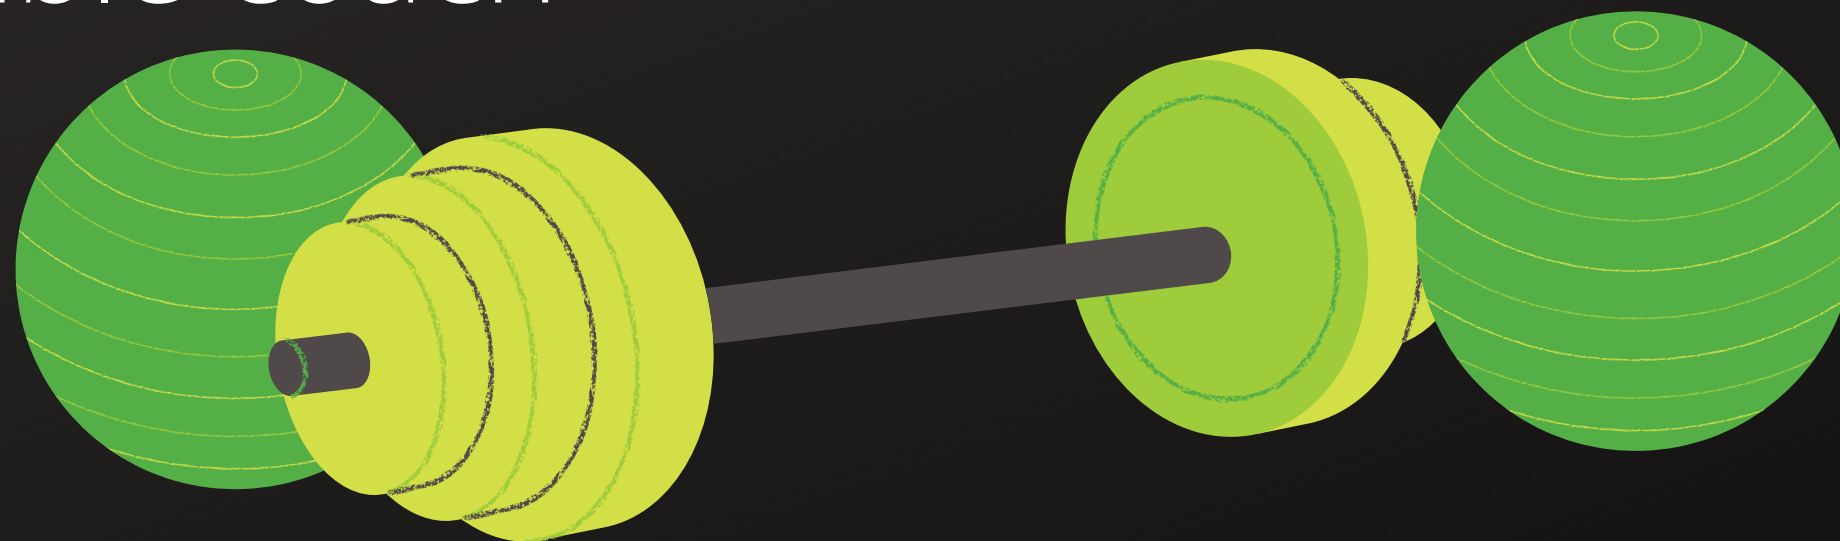

SYSTEM REQUEST

- Project sponsor :
- Coach
- business needs :
 - Each person finds the diet system that suits him.
 - Everyone finds an exercise regimen that works for them.
 - Offer features for scheduling workouts and setting reminders.
 - Track progress and achievements.

Business Requirements

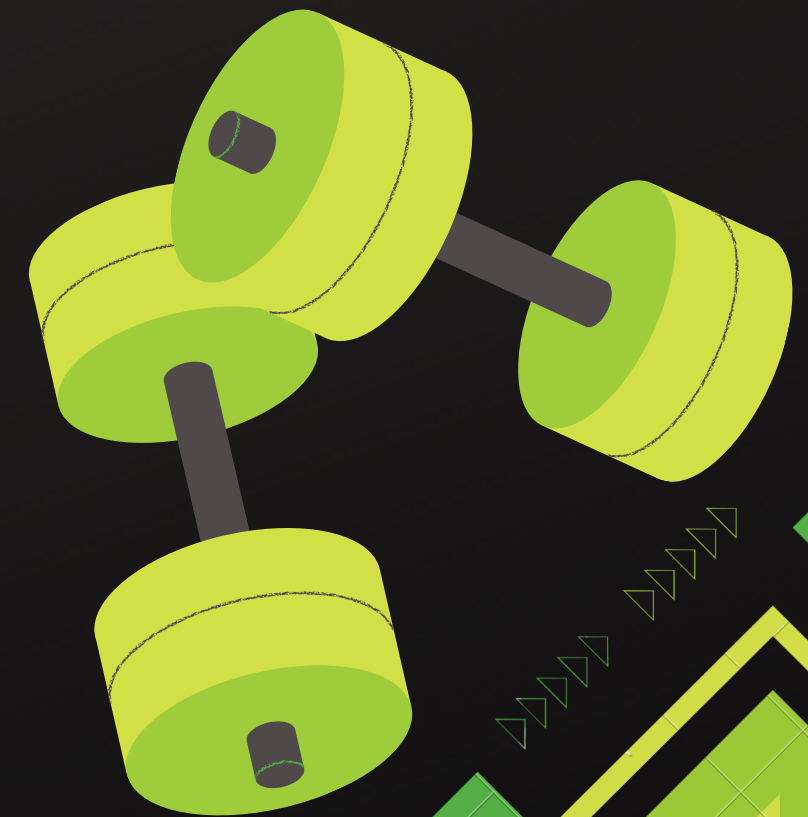

- User registration and profile creation.
- Database to store user information, workout plans, and progress.
- Payment processing if offering premium features or subscriptions.
- Knowledgeable coach

– Business Value –

- Offer monthly, quarterly, or annual subscription plans to access premium features such as:
 1. personalized workout plans.
 2. nutrition guidance.
 3. direct support from trainers.
- Integrate advertisements from:
 1. relevant fitness brands.
 2. nutrition products .
 3. wellness services .
- Collaborate with gyms or fitness centers to offer exclusive discounts or promotional deals to app users.

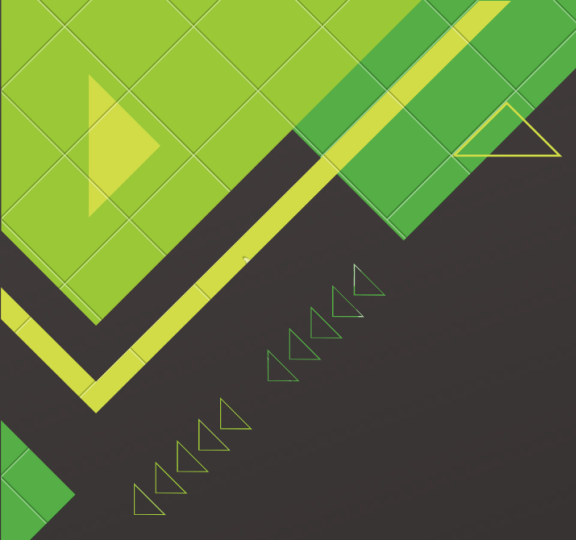

- Business Constraints -

- Competition from established fitness apps with large user bases.
- The coach has a permit from the Ministry of Youth and Sports.

- feasibility analysis -

- Technical Feasibility:
 1. Familiarity with application .
 2. Familiarity with technology .
 3. Online live support .
 4. Special services to accommodate the Disabled .
 5. Credit card collection and Check processing .

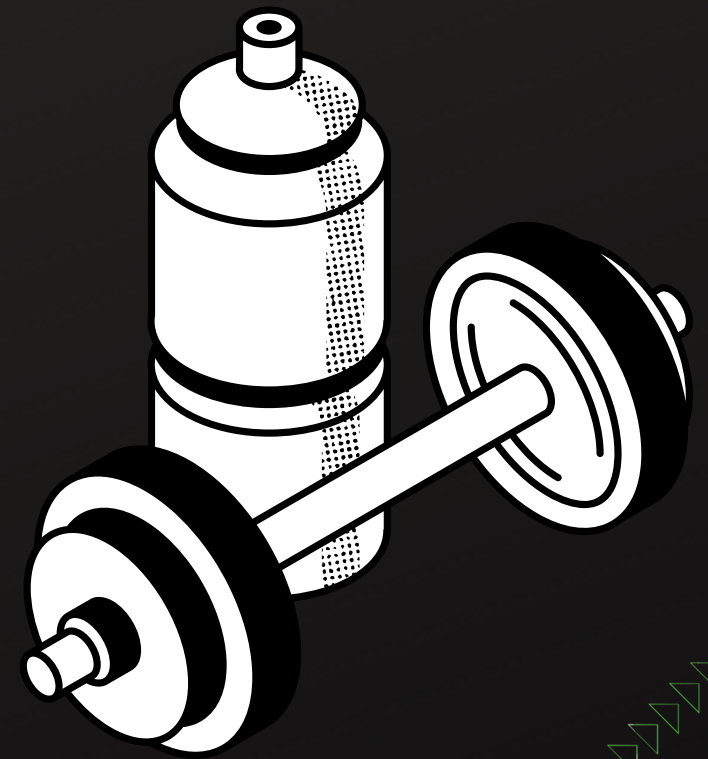

- feasibility analysis -

- Economic Feasibility:
 1. The monthly subscription cost is \$250
 2. The annual subscription cost is \$1200
 3. Annual profit 5%

- feasibility analysis -

- Organizational Feasibility:
 1. Coachs will have full access to the system
 2. Trainees will have less access
 3. Online tutorial for Trainees

GYM FUNCTIONAL REQUIREMENTS

– gym functional requirements –

- Process oriented:

1. The system must allow the trainers to register at first and log in later on.
2. Trainers will be able to track their progress.
3. The trainers will be able to see their schedule and change it to their likings by the guidance of the coach.
4. The system will check for availability according to trainers orders.
5. The system will check for the trainers' coach for possible offers.
6. Trainers will be able to choose from a variety of coaches.
7. Coaches will be able to make offers for their course and sales for their products(if exists).
8. The committed trainers should get rewarded by the system.

– gym functional requirements –

- Information oriented:

1. Trainers data is saved and can be accessed later.
2. The system will show the real-time products in our kit.
3. The system will present the sales and offers made by the coaches for the trainers.
4. Coaches will know the trainers and can observe their data.
5. Information about all the system users must be stored for long-term access.

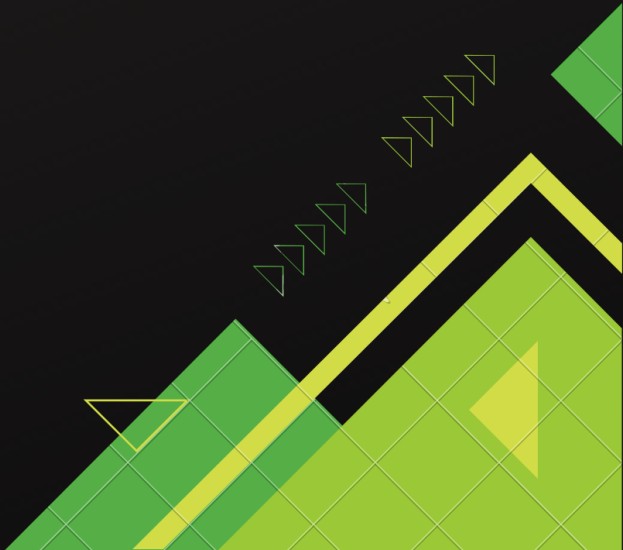

NONFUNCTIONAL REQUIREMENTS

– Nonfunctional requirements –

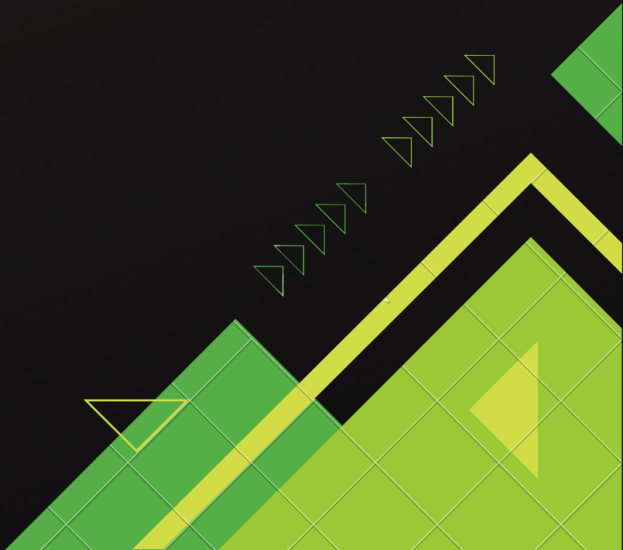

- Operational:
 1. The system should be able to adapt with the coaches and trainers needs.
 2. The system should be easy to use and work on any Desktop environment.

– Nonfunctional requirements –

- Performance:
 1. The interactions between the users and the program should be executed fast.
 2. The program should be available all time for all users due to their need to access the data.

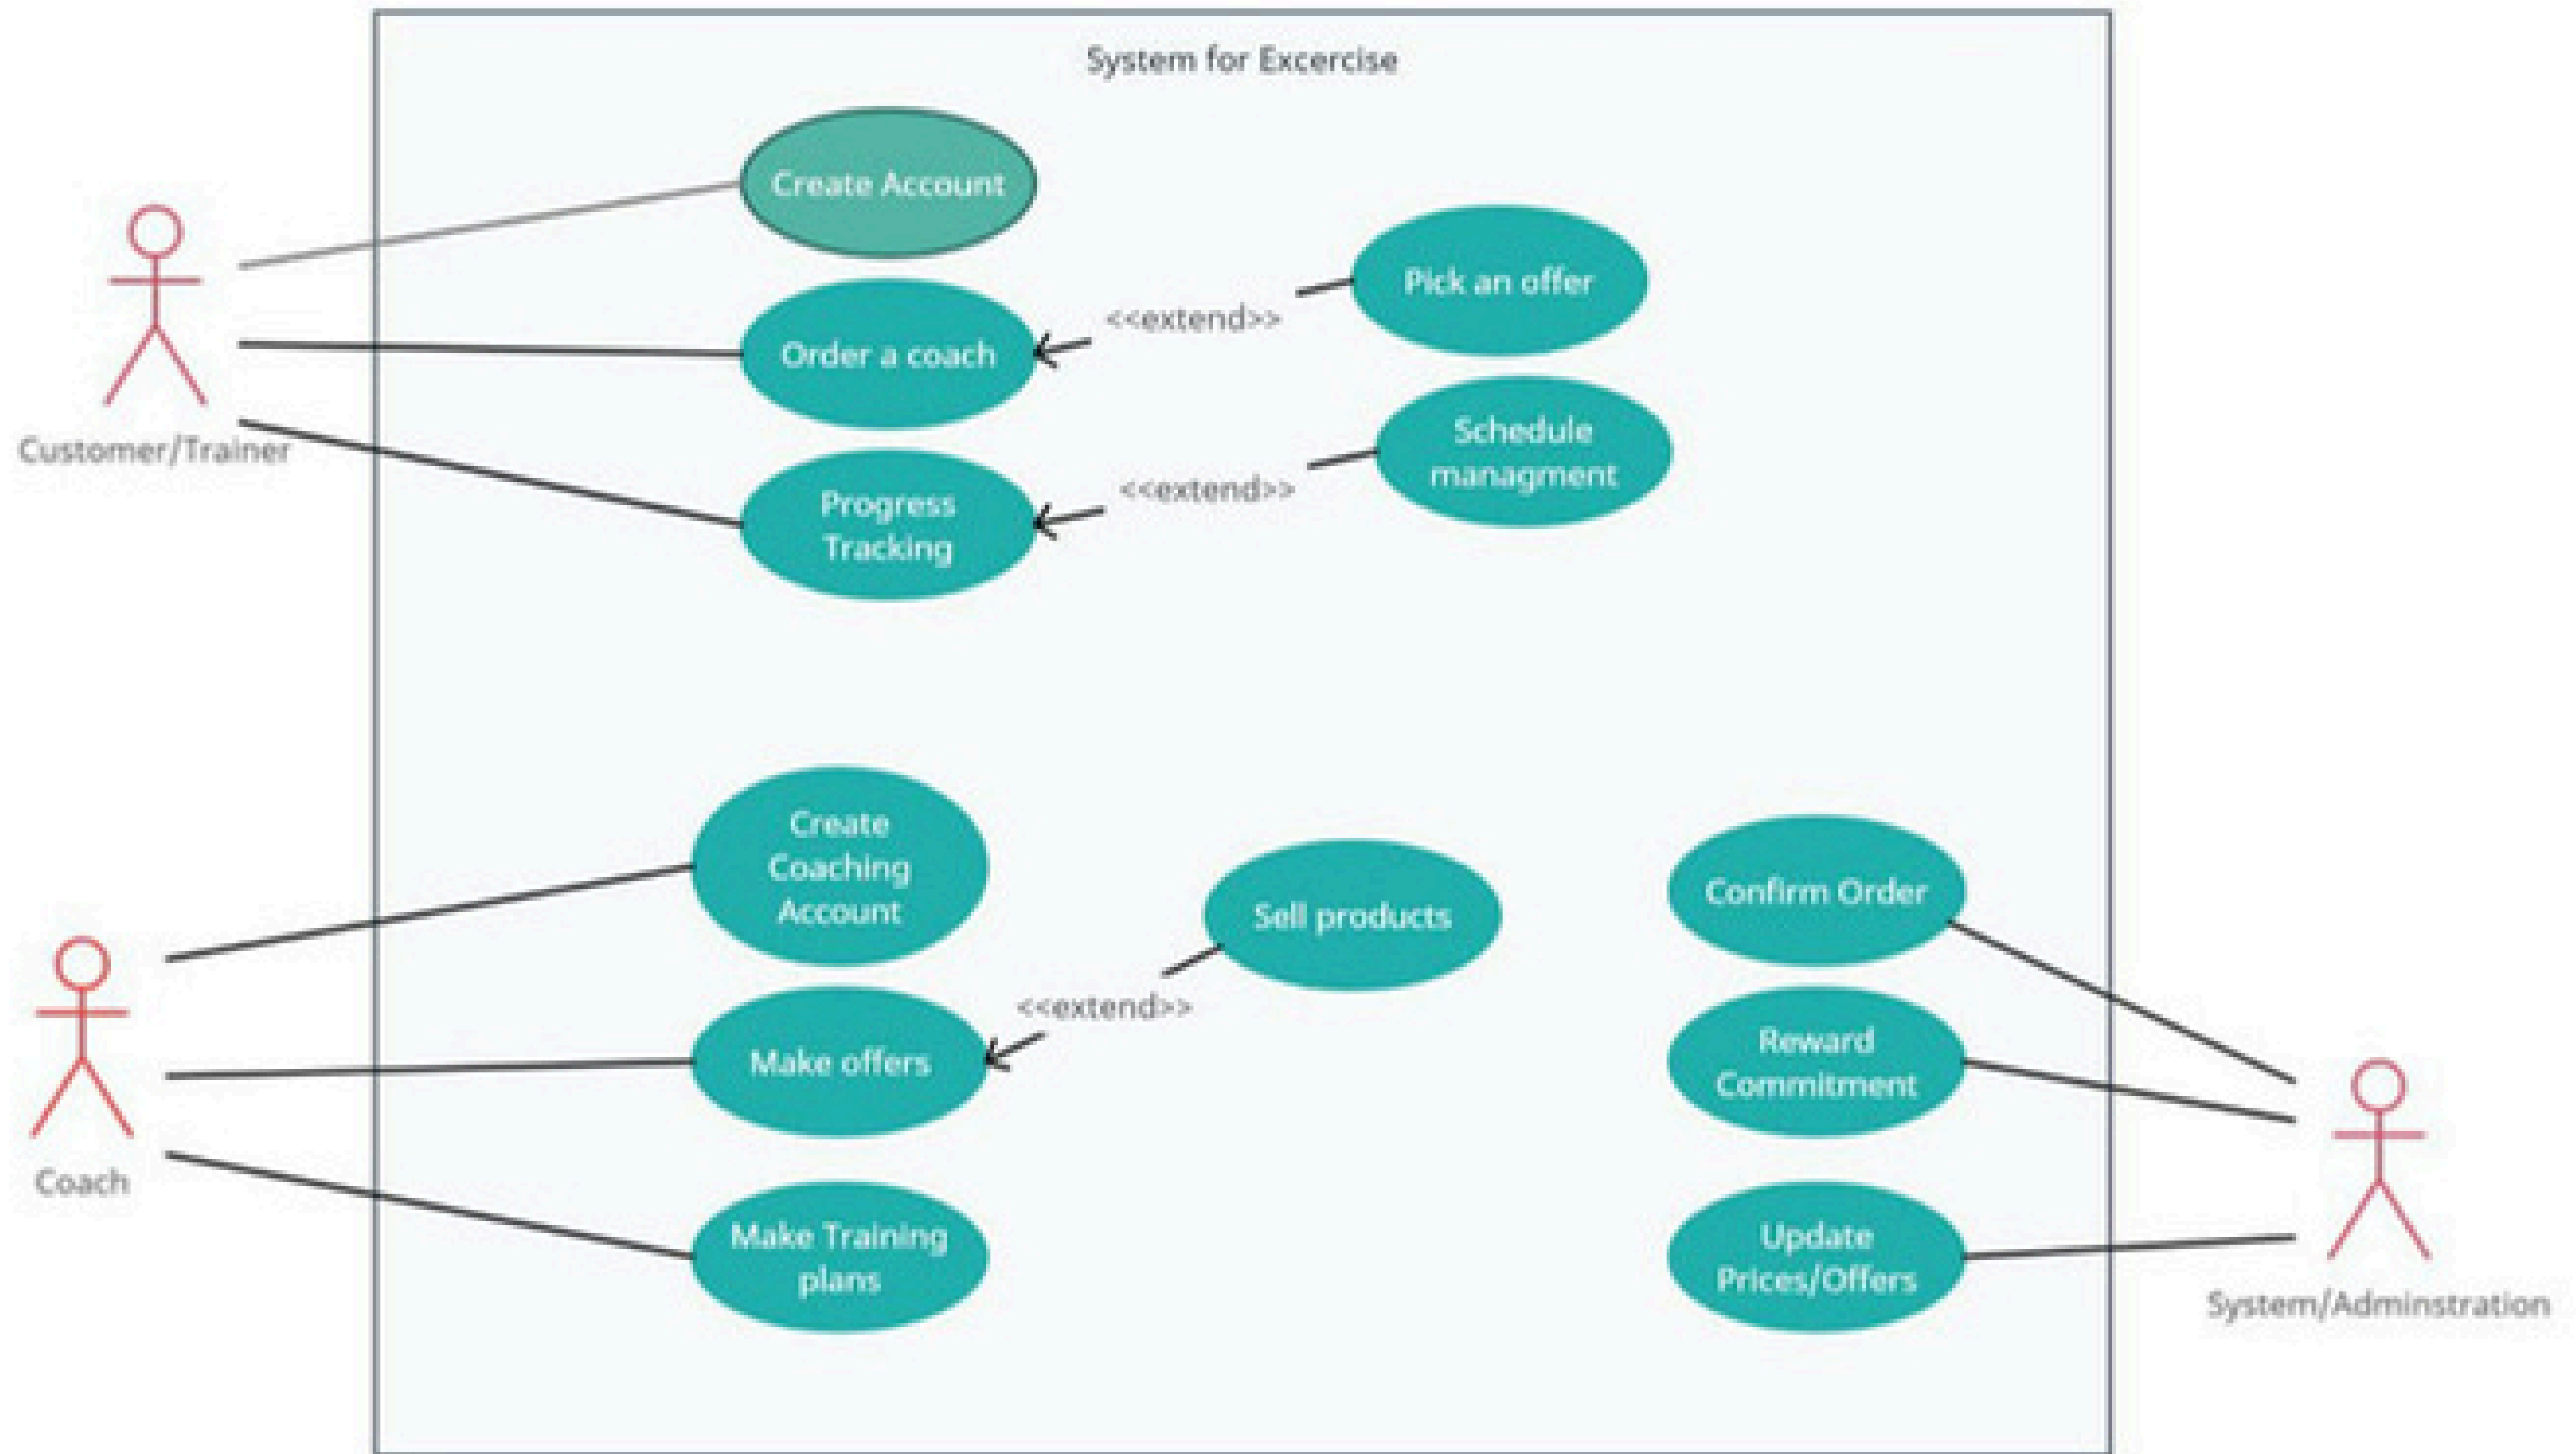

– Nonfunctional requirements –

- Cultural, Political and legal Factors:
 1. Personal information is protected in compliance with the Data Protection Act.
 2. The system should make sure that the coaches trustworthy.
 3. The system should have a refund method according to our policies.

– Nonfunctional requirements –

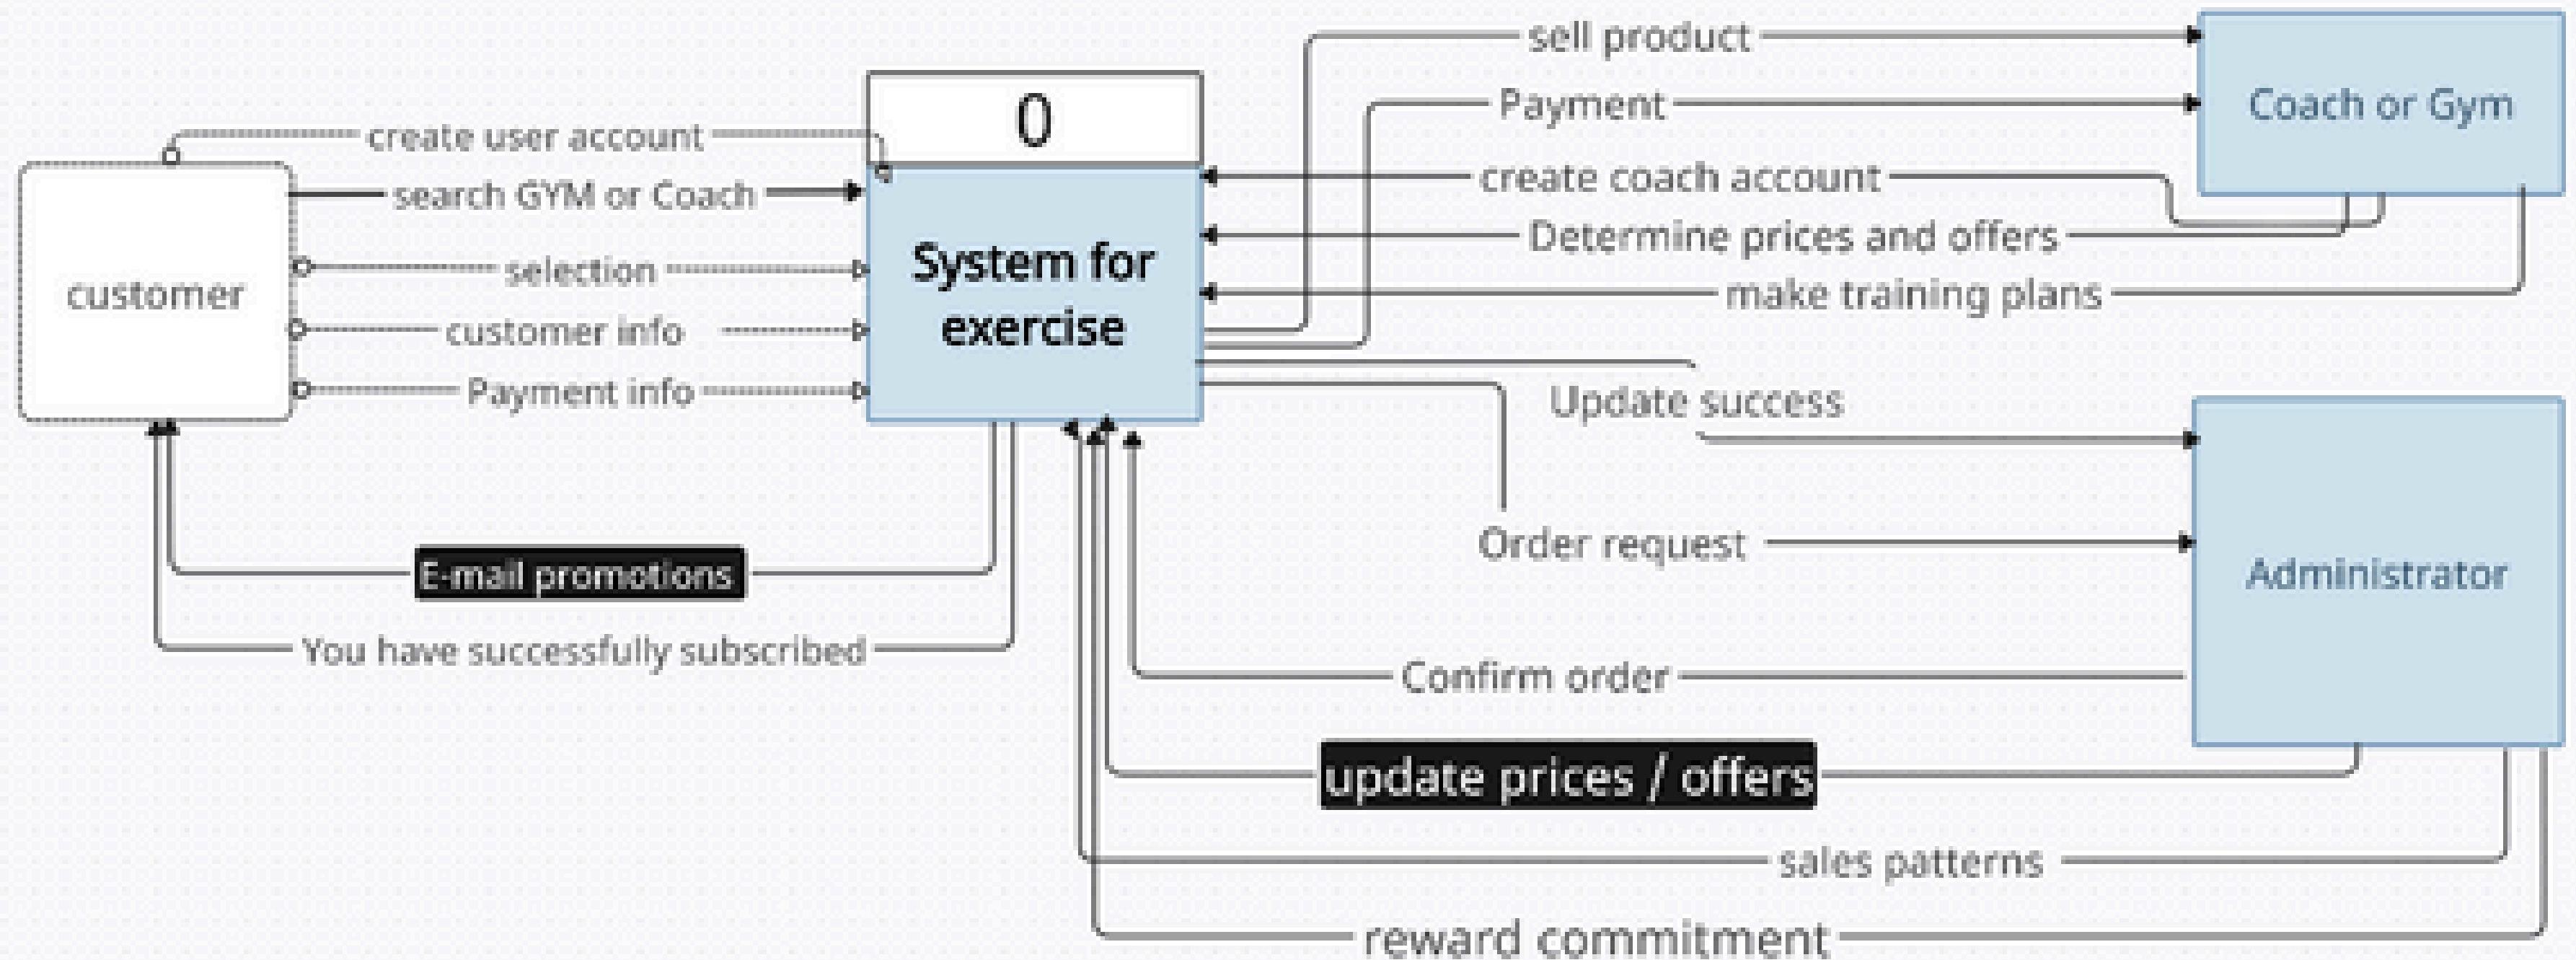

- Security:
 1. Coaches should only be able to see the data of their trainers.
 2. Coaches should be the only people to observe the trainers' data.
 3. Trainers can see thier data only and observe the coaches main data.

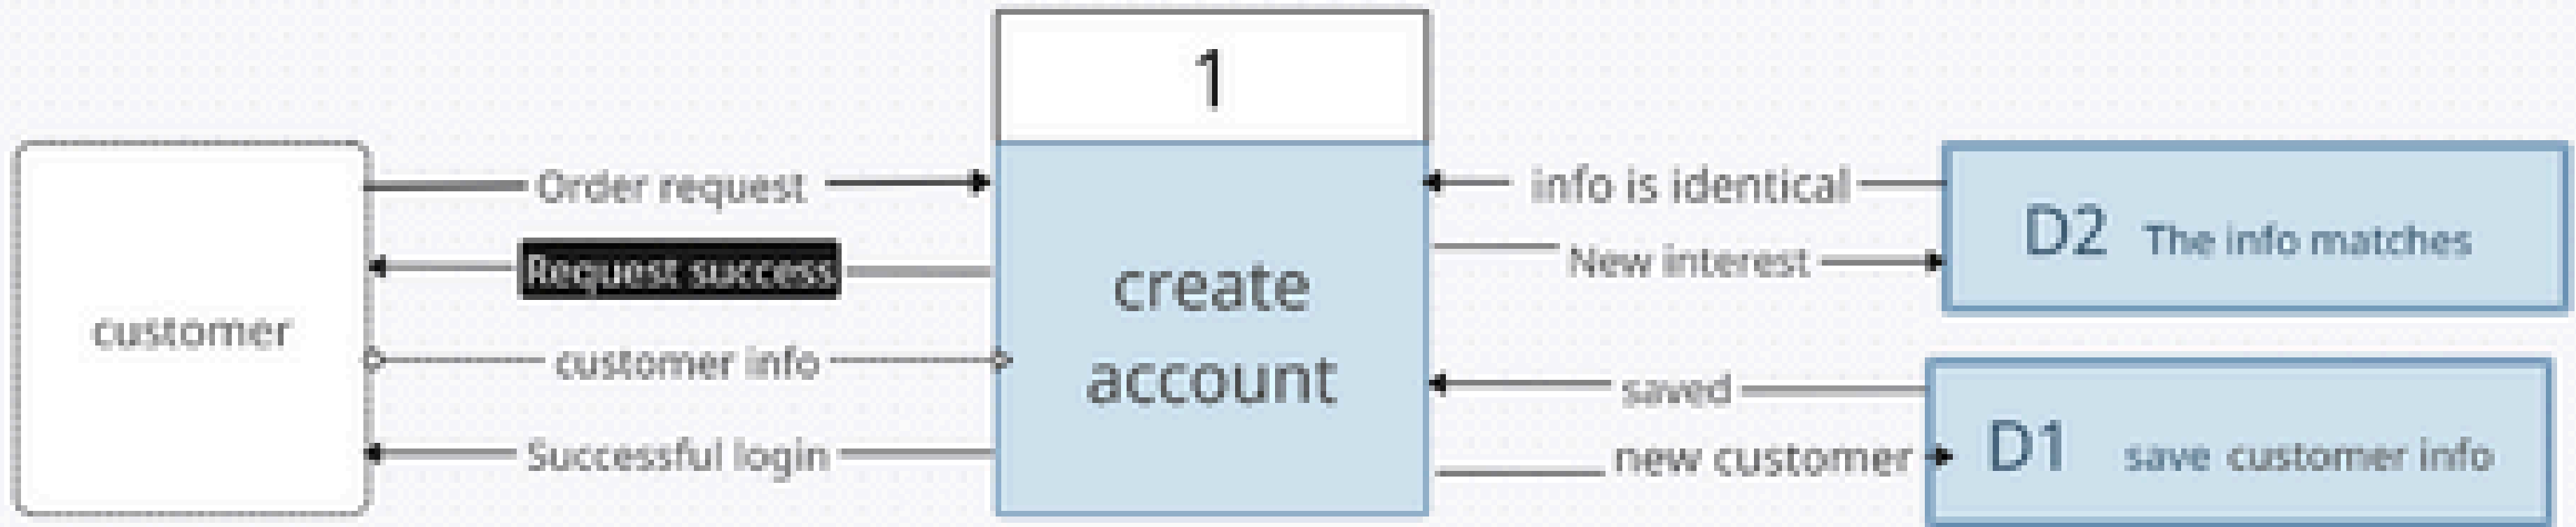

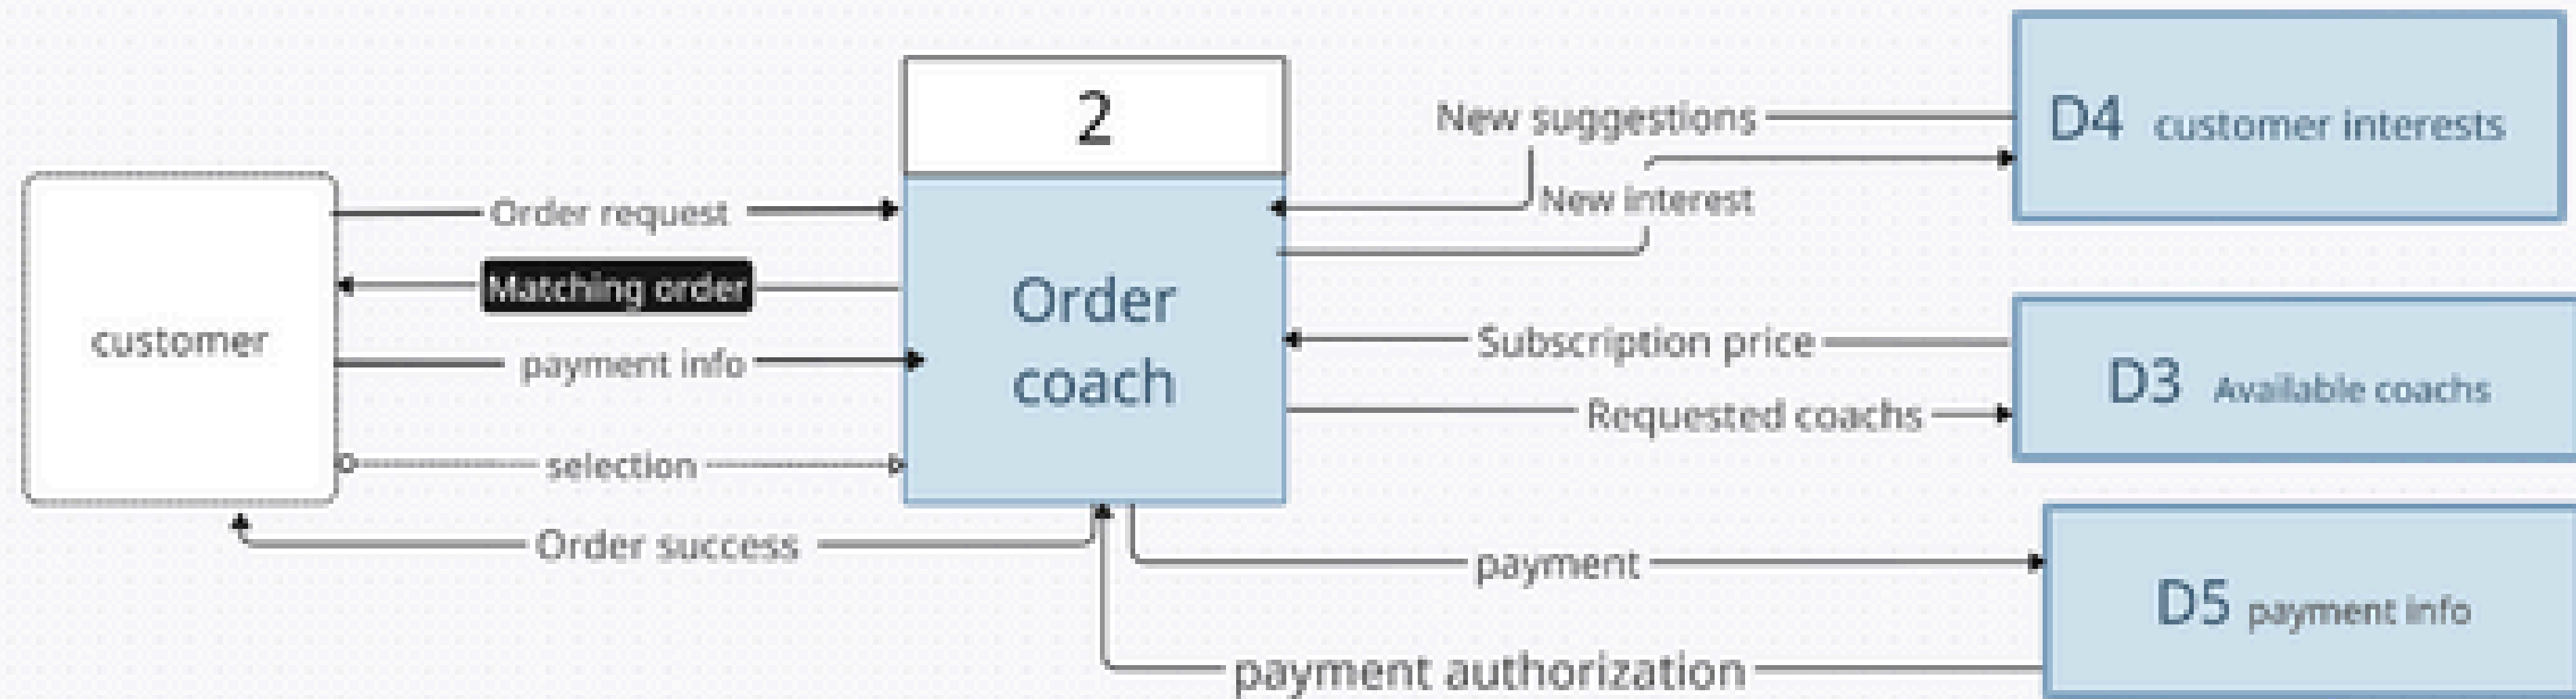

Use Case Name: Purchase Supplements	ID: 3	Priority: Low
Actor: Trainee or Coach		
Description: This use case describes a user of the program that wants to purchase supplements through the app.		
Trigger: The user goes to the supplements (market) page and <u>start</u> browsing the supplements.		
Type: ☒ External ☐ Internal		
Preconditions: - • The user is logged in. • The user has a verified (trusted) account. • There's eligible service for payment.		
Normal Course: • Log in and start using the app (personal username and password required). • Go to the market page or the customized tab for purchasing supplements. • Start browsing the supplements through different categories e.g. protein, creatine, and pre-workouts. • Select the desired supplements you want to purchase. • Add the selected supplements to the cart or wish list. • Go to the cart and select confirm purchase. • Add your information (personal information). • Add your payment method e.g. (credit-card, bank account, <u>instapay</u>, <u>fawry</u>, <u>cash</u>, and <u>installments</u>). • Confirm and verify your payment method through the payment service authentication. • Do the last step by pressing on confirm and have fun 😊.		
Postconditions: - • The user should be notified by any updates done on their wish list products i.e. Discount on some products or out of stock. • The user should be able to track their confirmed purchase. • The purchase may not be confirmed, and the cart can be modified. • Wish list can be modified. • Purchase can be cancelled in a specific period.		
Exceptions: • Account is not valid for purchasing. • Users want to purchase an out-of-stock product. • The payment method is not available or valid to use.		

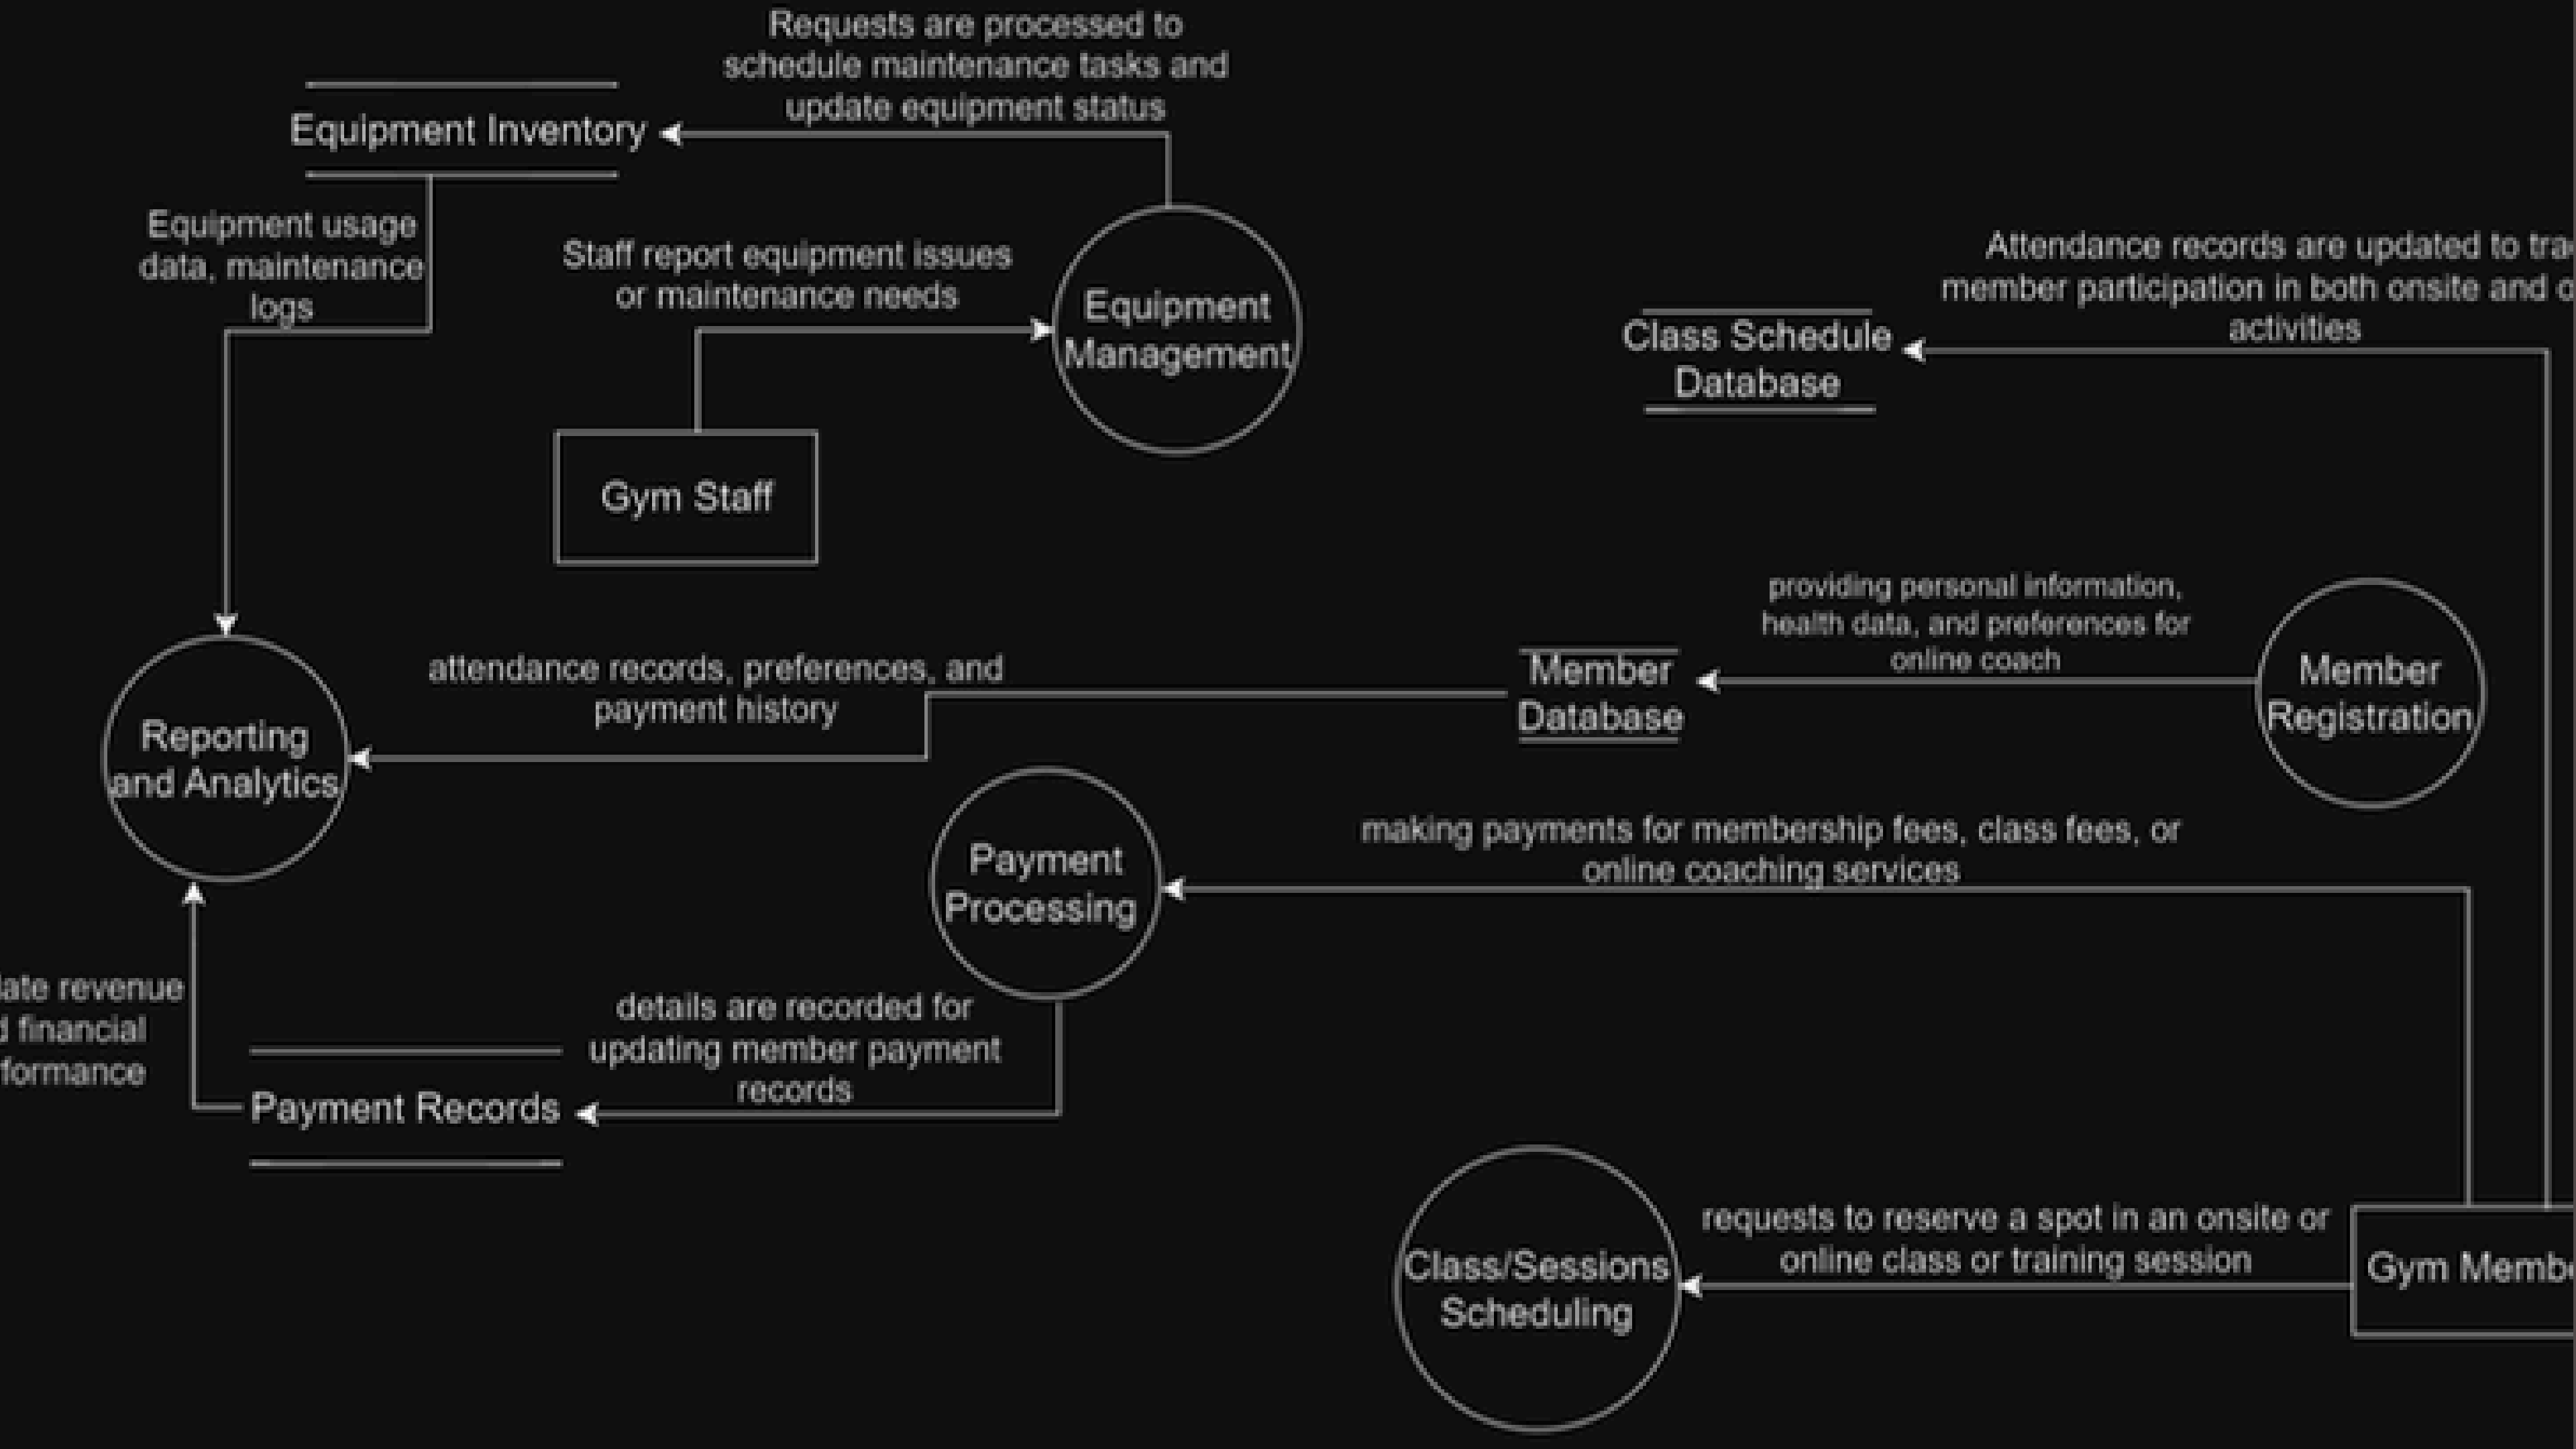

context diagram

1-Use Scenario Development

1-First Use Scenario: The Browsing Shopper User is not sure what they want to buy and will browse through several couches.

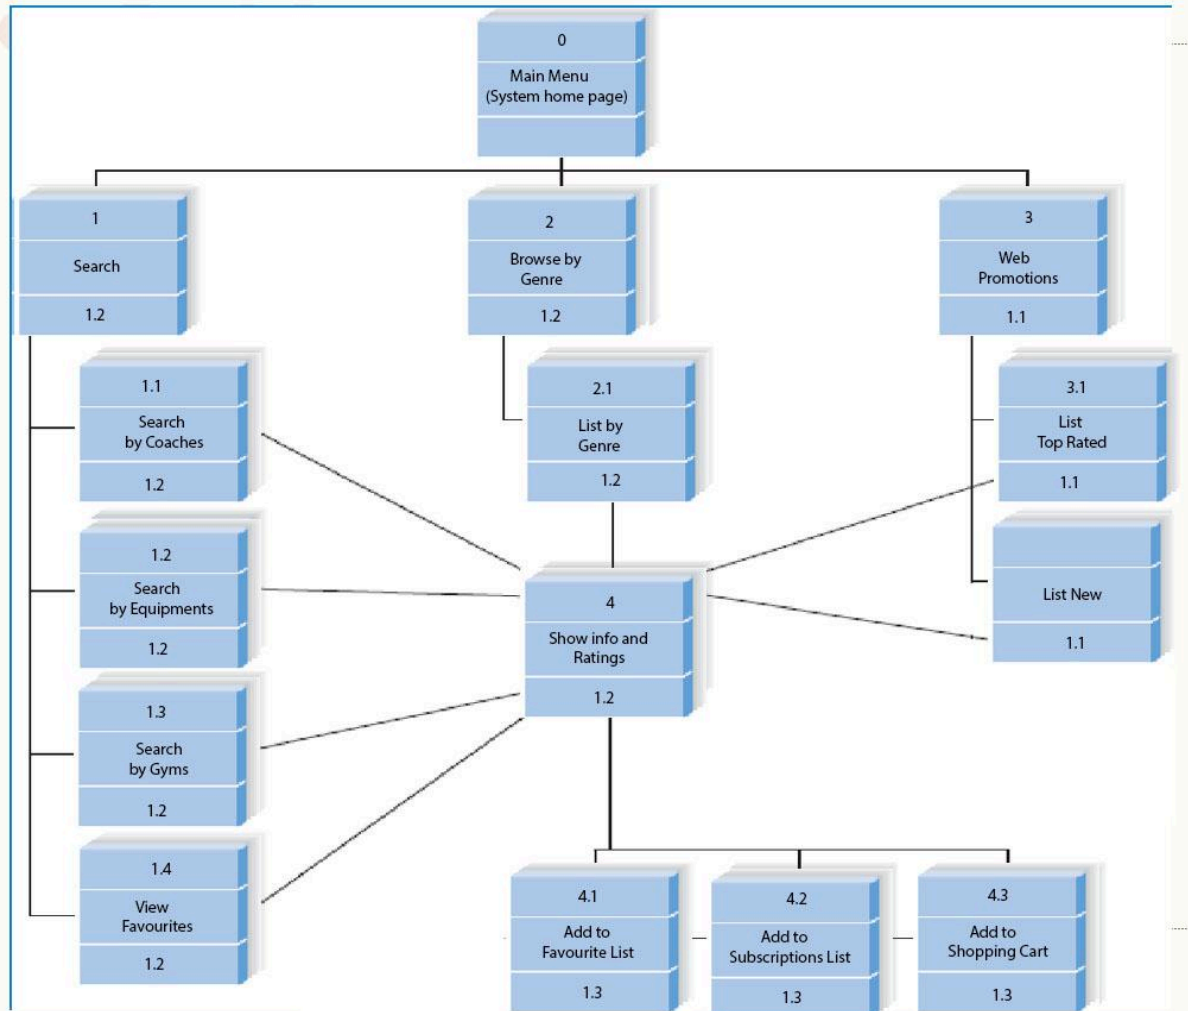

1. User browse couches or browse through an equipment category and gym subscription couches offer(1.2).
2. User will likely read the basic information for the coach, as well as the ratings from other trainees on this coach or equipment and gym subscription related to this couch. (1.3)
3. User will subscribe to this couch plan or put the equipment in the shopping cart (1.3) and may continue browsing for other equipment (1.2).
4. Eventually, the user will want to purchase the subscription he made for the couch or shopping cart that contains equipment, but will probably want to look through the shopping cart. Possibly discarding some equipment first(1.3))

2-Second Use Scenario: The Hurry-up Shopper User knows exactly what he or she wants and wants it quickly.

1. User will search for a specific couch who is popular or he knew him from a friend or equipment or gym subscription(1.2)
- 2. User will look at the price and enough other information or ratings to confirm that it is the desired one(1.3).
3. User will want to buy (process 2) or move on to other Web sites.

2-Interface Structure Design

System For Exercises
Interface structure diagram
(ISD)

3-Interface Standards Design

1. Interface Metaphor: A Gym.

2. Interface Objects

- a. Coach: Person who make exercising plans ,gym offers and offer equipments .
- b. • Equipment: Exercise equipment is any apparatus or device used during physical activity to enhance the strength or conditioning effects of that exercise by providing either fixed or adjustable amounts of resistance Couches offers them.
- c. • Gym Subscription: offers coach made for his gym to his Trainee.
- d. • Coach List: List of Coach(s) that match the specified criteria.
- e. • Favorites List: A place for the customer to store objects of interest.
- f. • Shopping Cart: Place to store equipments until they are purchased.
- g. • Subscription List: Place to store Gym or Coach subscriptions until they are purchased.

3. Interface Actions

- a. • Search for: Display a list that matches specified criteria.
- b. • Browse: Display a list sorted in order by some criteria.
- c. • Buy: Continue Pay Shopping Cart or Subscription .

5-Interface Evaluation

1. **Visibility of System Status:** **Applied**

Ensure that the app provides feedback promptly after each user action, indicating loading or completion status. For instance, when selecting a coach or equipment, there should be clear indications that the selection is being processed.

2. **Match Between System and the Real World:** **Applied**

Use terminology and concepts familiar to gym-goers. For instance, instead of technical jargon, use terms like "treadmill" or "dumbbells" which users can easily relate to.

3. **User Control and Freedom:** **Applied**

Allow users to easily navigate between different sections of the app, such as switching from selecting equipment to exploring subscription plans, and provide clear options to go back or undo actions if needed.

4. **Consistency and Standards:** **Applied**

Maintain consistency in design elements, layout, and navigation throughout the app. Ensure that similar functions behave predictably across different sections of the app.

5. **Error Prevention:** **Applied**

Implement validation checks for user inputs to prevent errors, such as selecting an unavailable coach or equipment. Provide informative error messages guiding users on how to rectify the issue.

6. **Recognition rather than Recall:** **Applied**

Minimize the need for users to remember information by providing visual cues and labels for options and actions. For instance, display coach profiles with clear names, photos, and specialties instead of expecting users to recall details from previous interactions.

7. **Flexibility and Efficiency of Use:** **Not Applied**

Offer customization options, such as allowing users to filter coaches by specialization or equipment by type, to cater to varying user preferences and goals.

8. **Aesthetic and Minimalist Design:** **Applied**

Ensure that the interface is visually appealing and clutter-free, with intuitive placement of elements to facilitate easy navigation and interaction.

9. **Help Users Recognize Recover from Errors:** **Not Applied**

Provide clear instructions or tooltips to guide users through the selection process and assist them in resolving any encountered errors or issues.

10. **Help and Documentation:** **Not Applied**

Offer readily accessible help resources, such as FAQs or tutorials, to assist users in understanding how to use different features of the app effectively.
